Welcome to the preconference ESEE 2013 in Reims

Dear participants,

Two years after the ESEE Istanbul conference, the European Society for Ecological Economics is glad to welcome you for the preconference ESEE 2013 in Reims. Conferences of keynote speakers, Ph-D and post-doctoral proposals, discussions and debates about the relationships between environment and institutional dynamics are the keystone of these two days of preconference. A new generation of researchers coming from Eastern European Countries, France, Germany, Portugal, Scandinavia, Turkey, United Kingdom..., will discuss about important topics of ecological economics such as degrowth, payments for environmental services, resources management, agriculture, climate change, sectoral governance, social metabolism, etc. Alongside Reims organizers, some important figures in institutionalism and ecological economics, such as Geoffrey Hodgson, Clive Spash, Arild Vatn and Thierry Kirat, will be here for lead this summer school, listen and, if necessary, advise this young generation of researchers.

For implementing this great event, the laboratory REGARDS and its organizing committee look forward to welcome you in the city of Reims, the *Coronation City* and Champagne town. We wish you the best time with us. Enjoy your stay !

What about the organizing committee

This conference has been supervised by Franck-Dominique Vivien, Martino Nieddu and Romain Debref (PhD student). They have been joined by Florence Gallois, Estelle Garnier Cyril Hédoin, all members of the laboratory REGARDS (EA 6292), and by Leslie Carnoye (PhD Student - CLERSE - Lille) who representing the Organizing Committee of the Conference for organizing the reception of students.

Presentation of the Laboratory REGARDS (EA 6292)

REGARDS is composed of a thirty of professors and lecturers and twelve PHD Students of two fields: Economics and Management Sciences, working at University of Reims Champagne Ardenne and Reims Management School.

The lab is organized with a non-exclusive priority on three thematic research areas:

- (1) Cultural economics and management of cultural goods, with a particular focus on wine and gastronomy analyzed as semiotic goods and as institutionalized sectors (JEL code: Z1);
- (2) Economics and management of sustainable development, with specific focus on institutions in sustainable transition management, and on the transition from cheap oil era to an sustainable use of renewable resources in chemicals and materials – critical studies on CO2 markets, CO2 capture and politics of biodiversity, and techno-science management are also in our agenda;
- (3) Economics and management of health and non-profit organisations (third sector).

Two methodology transversal seminars complete this organization : *Management Sciences* and *Institutionalisms*.

Question of sustainability is discussed by several members of the laboratory with an original approach. We believe that there is an analytic confusion between market assets and patrimonies (in the categories of Social capital, natural capital, for example). So, a crucial distinction must be drawn between the concept of capital and the concept of patrimony. It is not the same relationships in “Managing as assets” (consuming capital) or “Managing as patrimony” (preserving an existence).

Various configurations of institutionalized compromises between these two modes of management can be identified both in areas of cultural goods, in social and health policy, and in questions of environmental sustainability.
